

# Contents

<b>1</b>	<b>Local theory of curves</b> .....	1
1.1	How to define a curve .....	1
1.2	Arc length .....	9
1.3	Curvature and torsion .....	15
	Guided problems .....	28
	Exercises .....	37
	<i>Supplementary material</i>	
1.4	<i>The local canonical form</i> .....	50
1.5	<i>Whitney's Theorem</i> .....	55
1.6	<i>Classification of 1-submanifolds</i> .....	58
1.7	<i>Frenet-Serret formulas in higher dimensions</i> .....	63
<b>2</b>	<b>Global theory of plane curves</b> .....	69
2.1	The degree of curves in $S^1$ .....	69
2.2	Tubular neighborhoods .....	77
2.3	The Jordan curve theorem .....	82
2.4	The turning tangents theorem .....	88
	Guided problems .....	94
	Exercises .....	97
	<i>Supplementary material</i>	
2.5	<i>Convex curves</i> .....	100
2.6	<i>The four-vertex theorem</i> .....	103
2.7	<i>Isoperimetric inequality</i> .....	107
2.8	<i>Schönflies' theorem</i> .....	111
<b>3</b>	<b>Local theory of surfaces</b> .....	123
3.1	How to define a surface .....	123
3.2	Smooth functions .....	138
3.3	Tangent plane .....	141
3.4	Tangent vectors and derivations .....	145
	Guided problems .....	155

Exercises .....	159
<i>Supplementary material</i>	
3.5 Sard's theorem .....	167
3.6 Partitions of unity .....	169
<b>4 Curvatures</b> .....	<b>173</b>
4.1 The first fundamental form .....	174
4.2 Area .....	181
4.3 Orientability .....	186
4.4 Normal curvature and second fundamental form .....	191
4.5 Principal, Gaussian and mean curvatures .....	199
4.6 Gauss' Theorema egregium .....	207
Guided problems .....	214
Exercises .....	227
<i>Supplementary material</i>	
4.7 Transversality .....	240
4.8 Tubular neighborhoods .....	247
4.9 The fundamental theorem of the local theory of surfaces .....	251
<b>5 Geodesics</b> .....	<b>257</b>
5.1 Geodesics and geodesic curvature .....	258
5.2 Minimizing properties of geodesics .....	271
5.3 Vector fields .....	278
Guided problems .....	289
Exercises .....	293
<i>Supplementary material</i>	
5.4 The Hopf-Rinow theorem .....	300
5.5 Locally isometric surfaces .....	308
<b>6 The Gauss-Bonnet theorem</b> .....	<b>315</b>
6.1 The local Gauss-Bonnet theorem .....	316
6.2 Triangulations .....	320
6.3 The global Gauss-Bonnet theorem .....	327
6.4 The Poincaré-Hopf theorem .....	337
Guided problems .....	345
Exercises .....	346
<i>Supplementary material</i>	
6.5 Existence of triangulations .....	352
<b>7 Global theory of surfaces</b> .....	<b>359</b>
7.1 Surfaces with constant positive curvature .....	360
7.2 Surfaces with constant zero curvature .....	363
7.3 Surfaces with constant negative curvature .....	369
Guided problems .....	376
Exercises .....	377

Contents	xiii
<i>Supplementary material</i>	
7.4 Positive Gaussian curvature .....	380
7.5 Covering maps .....	387
7.6 Non-positive Gaussian curvature .....	392
<b>References</b> .....	397
<b>List of symbols</b> .....	399
<b>Index</b> .....	401
